

G

Frantic Gecko

by Gerhard Zitzmann of Vienna, Austria

August, 2003

The frantic Gecko is a kite for light to middle wind conditions, the material I use is Orcon for the sail, the bow is 0.05 inch Carbon, the spine is made from Indonesian Bamboo and the battens are 0.03 Carbon. I saw a shape like this on a Custom made fighter from Paul Peters that was based on a fighter from Mike Coons, but I didn't find a plan like this in the web and so I make my own...

When you build this kite I will be very happy when you send a foto to me, I can Presented it on our homepage.

I hope you like building and flying the F.G.
